

CS 151

Final Project

Remaining Tasks

- **Export Button:** this button will export all the tasks of the current “month” into a .txt file. The name of the file will be month_year.txt, for example “January_2013.txt”. Note that.txt will contain recurring events of the month only.
- **Buttons edge cases** (exp when nothing is chosen but the user clicks Delete or Edit, these buttons should do nothing)
- The navigation can **go as far as the Gregorian Calendar can make it** (for now, we allow 2000-2050)
- The **days that are not related to the current month** should appear in grey color. For example, the days after January 31st are in grey color (for now, every frame only consists of the days of the month, we haven't implement the non-related days)
- When you click on a particular date, the current view on frame 2 will change accordingly (**not pop up a new frame but change the frame**)
